Experience

NVIDIA

Bangalore, Karnataka

Software Engineering Intern

Jan 2026 - Jul 2026

- Built backend APIs for automated database provisioning across PostgreSQL, MySQL, Neo4j, and DocumentDB using AWS RDS, reducing manual setup time from 2 days to 15 minutes
- Developed self-service internal platform enabling engineering teams to provision production-ready databases without DBA intervention, cutting new-team onboarding from days to minutes
- Standardized provisioning across 5 database engines via API-driven automation and infrastructure-as-code, eliminating manual configuration drift and ad-hoc deployment scripts

Winniio AB

Remote

Research and Development Intern (AI/ML)

Aug 2025 - Jan 2026

- Built SimuMatch, a hybrid athlete-event recommendation system combining SBERT embeddings (384-D), LightGBM LambdaRank, and LLaMA-3.3-70B, achieving NDCG@5 of 0.870 (+6.2% over baseline)
- Engineered 8 domain-specific compatibility features and a learn-to-rank pipeline optimizing NDCG directly; deployed as a 5-page Streamlit web application with feedback-driven retraining
- Applied SHAP explainability to surface recommendation drivers - SBERT embedding similarity contributed 59.5% of model gain (~4× its rule weight), directly informing model investment priorities

DRDO (SSPL Lab)

New Delhi

Summer Intern

May 2025 - Jul 2025

- Designed a classified memo management system for 14 departments with role-based access controls enforcing document sensitivity levels across inter-departmental and internal communications
- Architected database schema for end-to-end memo lifecycle (creation, routing, acknowledgment, and progress tracking) with audit trails for compliance

Project

Literary Text Analysis Engine | Python, Streamlit, HuggingFace Transformers, spaCy, NetworkX, PyVis

- Built an interactive NLP app analyzing 70,000+ Project Gutenberg titles with transformer-based summarization, named entity recognition, and stylometric analysis
- Implemented character relationship extraction using spaCy NER with co-reference heuristics, generating interactive force-directed network graphs (PyVis) with community detection coloring
- Built cross-author style comparison using TF-IDF distinctive word analysis, readability scoring (Flesch-Kincaid, Gunning Fog), and POS distribution for side-by-side comparison of up to 4 books

Education

Amity University

Noida, UP

B.Tech. Computer Science and Engineering | Minor in Data Science and Analytics

June 2026

CGPA: 9.17 | 4x Merit-based Scholarship

Birla Vidya Niketan

New Delhi

AISSE (2022) - 94.2% | AISSE (2020) - 96.8% | 2x Ideal Student Award | 4x Scholar Award

Technical Skills

Backend & Infra: AWS (RDS), FastAPI, Redis, Docker, Kubernetes, Helm, REST APIs, CI/CD, GitOps

ML & NLP: LightGBM, SBERT, HuggingFace Transformers, TensorFlow, spaCy, Scikit-learn, NumPy, SHAP

Databases: PostgreSQL, MySQL, MongoDB, Neo4j, DocumentDB, Redis

Languages: Python, SQL, Java, C++

Leadership & Activities

Google Developer Group Amity | Core Team

Aug 2024 - June 2025

Software Engineering Club | Vice-President

Jul 2023 - June 2025

- Organized the D2D conference, sponsored by GitHub and hosted at Zomato, attracting over 200 participants

Birla Vidya Niketan | House Captain

Apr 2020 - Apr 2021
